AB Soda cracker biscuits (recipe included) were prepared with the addition of

BHA (at levels of 0.01, 0.02 or 0.03% by wt. of shortening) or with the

addition of the following natural antioxidants: powdered leaves and

flowering tops of marjoram (0.5 or 1% by wt. of **dough**), spearmint (0.5

or 1%), **peppermint** (0.5%), basil (0.5%) or a mixture of all 4 herbs (0.5

or 1%); purified ether extract of marjoram, spearmint, peppermint or basil

(each at a level of 0.02% by wt. of shortening). The biscuits were baked,

packaged in cellophane nitrocellulose film and stored at room temp. for

≤135 days. Samples were withdrawn at intervals and analysed for peroxide value. Biscuits containing no added antioxidant served as controls. Results indicated that the purified ether extracts of the herbs

had an excellent antioxidant effect and that the powdered herbs also

generally had an antioxidant effect, an exception being the mixture of all

4 herbs at the 1% level which had a pro-oxidant effect. It is suggested

that the purified ether extracts at the 0.02% level could be used as

replacements for conventional antioxidants in soda cracker biscuits; these

extracts had no effect on organoleptic properties.
